

Vakilim.az

Complete Platform Documentation

Lawyer-client marketplace & legal-document service for Azerbaijan

Version 2.0 · 12 July 2026 · matches codebase at sprint PL1 + Sentry

Contents

1. Platform overview

Vakilim.az connects clients in Azerbaijan with verified lawyers (advokat / hüquqşünas) for paid video and written consultations, and sells generated legal documents with cryptographic verification. The interface is fully trilingual — Azerbaijani, Russian, English — across 64 pages and 63 API endpoints.

Live domain: <https://vakilim.az> (all pages are locale-prefixed: /az, /ru, /en). Hosting: Vercel; database: Neon PostgreSQL; storage: Cloudflare R2; video: LiveKit; OTP: WhatsApp Cloud API (pending Meta verification); email: Resend; AI: Anthropic Claude; scheduler: cron-job.org; error monitoring: Sentry.

Stack: Next.js 16 (App Router, Turbopack) · TypeScript · Tailwind v4 · Prisma 7 · next-intl v4 · bcryptjs · vitest (56 tests) · design system “Aydın” (rounded-2xl, emerald #10B981, navy #0F2A43).

2. Roles & access model

Role	Obtained	Capabilities
CLIENT	any signup door	browse, favorite, book & pay, chat, call, review, dispute, buy documents, AI intake
LAWYER	client + approved application	everything a client has, plus services, availability, request decisions, replies, dispute responses, earnings
ADMIN	assigned in DB	verification, dispute resolution, review & chat moderation, recordings, template authoring

Access is enforced server-side on every page and route: public pages render for anyone; account pages require a session; lawyer pages require a profile (and APPROVED status where noted); admin pages require the ADMIN role.

3. Authentication system

Five doors, one session. Every successful authentication mints an identical 30-day session (hashed token in DB, hardened cookie).

Email + password: Primary door. Requires a verified email; wrong credentials return one deliberately vague message.

Two-phase signup: Details → OTP to the required phone → account created already phone-verified → email link (which itself signs the user in).

Phone OTP: The original door, kept for legacy and preference; international numbers accepted; verifies the phone on every success.

Google (OIDC): Hand-rolled, env-gated; linking law prevents duplicates; phoneless arrivals are walled at /complete-phone.

Two-factor (optional): Password + WhatsApp code; enabling requires proving the phone; disabling requires the password.

4. Page reference

Each page includes a schematic wireframe in the platform's visual language (Aydın) — proportions and copy are illustrative; structure, controls and states are exact. Every page below exists under each locale prefix (/az, /ru, /en). Layout descriptions reflect the Aydın design system.

Public & marketing

Home — /{locale}

Layout: Hero with search intent, primary CTA into the directory, AI-assistant CTA, value blocks in the Aydın style (rounded-2xl cards, emerald accents, navy headings).

Logic & steps:

- Server component; localized metadata + hreflang.
- AI CTA links to /intake.
- Directory link carries no filters (defaults).

Access: Public.

Limitations: Static content besides translations.

Directory — /{locale}/lawyers

Layout: Filter bar (practice area, type, city, sort), paginated grid of lawyer cards: photo/initials ring, name, type · city, rating ★, from-price, next-available chip, favorite heart (clients only).

Logic & steps:

- Fetches APPROVED profiles with services, visible reviews, completed counts.
- Ranking blends rating, volume and recency.
- Next-available chip computed live from the slot engine (two batched queries).
- Heart toggles via POST /api/favorites without navigating (stopPropagation).
- Pagination via ?page with common.more control.

Access: Public; hearts render only for CLIENT role.

Limitations: Chip shows the nearest slot only; empty when no rules or fully booked.

Lawyer profile — /{locale}/lawyers/{slug}

Layout: Header: avatar, name, verified badge, favorite heart; per-locale bio; practice-area chips; services with prices/durations; availability picker; reviews with lawyer replies.

Rəylər ★ 4.9 (23) — cavablarla birlikdə

Logic & steps:

- Profile must be APPROVED, else 404.
- Slots fetched per service from /api/lawyers/[slug]/slots.
- Booking widget drives slot selection → POST /api/bookings → redirect to /pay/[bookingId].

Access: Public; booking requires login (widget prompts).

Limitations: Bio falls back to AZ when a locale version is empty.

AI legal assistant — /{locale}/intake

Layout: Title, subtitle, 5-row textarea with live character count (max 1200), analyze button; results: practice-area pill, orientation summary card, drafted first message with copy button, up to 3 matching lawyer cards; permanent not-legal-advice disclaimer.

⚠ Bu, hüquqi məsləhət deyil — istiqamətləndirici məlumatdır.

Logic & steps:

- POST /api/intake with text+locale.
- Claude classifies into a DB-provided area slug (or `other`); lawyers come from the database, never the model.
- No key configured → deterministic [AI DEV] echo keeps the flow demoable.

Access: Public (anonymous allowed).

Limitations: Rate-limited 5 requests / 10 min per IP; orientation only, never advice.

Document catalog — /{locale}/templates

Layout: Grid of paid legal document templates: title, description, price.

✓ Sənəd həqiqidir — 05.07.2026, İcarə müqaviləsi

Logic & steps:

- Code printed on each paid PDF; lookup returns document metadata on match.

Access: Public.

Limitations: Verifies issuance, not legal validity.

Legal pages — [/{locale}/terms](#) · [/privacy](#) · [/refund-policy](#)

Layout: Long-form legal text in AZ with the LAYİHƏ (draft) banner and official-note chrome.

Vakilim.az

VəkillərSənədlərAI köməkçiDaxil ol

LAYİHƏ — mətn hüquqi baxışdadır

İstifadə şərtləri

(/terms · /privacy · /refund-policy — eyni tərtibat, AZ mətn)

Logic & steps:

- Localized chrome; bodies currently AZ-only by design.

Access: Public.

Limitations: Drafts pending professional legal review; RU/EN translations parked.

Content & SEO surfaces

Blog — [/{locale}/blog](#) · [/blog/\[slug\]](#)

Layout: Card grid of articles (cover image, title, excerpt, date, author); article page renders lite-markdown with cover, byline and per-locale body.

Logic & steps:

- Post model with kind=BLOG; published when publishedAt is set and in the past.
- Lite-markdown renderer escapes HTML first, then permits ## headings, **bold** and [links](url).
- Article OG metadata carries the cover image.
- Lawyer-authored articles appear here once an admin publishes them.

Access: Public.

Limitations: Cover URLs must be https (validated); no comment system by design.

News — `/locale/news · /news/[slug]`

Layout: Same machinery as the blog with `kind=NEWS`; platform announcements.

Logic & steps:

- Shares the post-list and post-article components with the blog.

Access: Public.

Limitations: —

Q&A — `/locale/qa`

Layout: Accordion of frequently-asked legal questions grouped by practice area, with FAQPage JSON-LD for rich search results.

Logic & steps:

- QaEntry model; native `<details>` elements (no JS).
- Entries optionally tagged to a practice area, surfacing on that area's landing page.

Access: Public.

Limitations: Content is admin-authored; not legal advice.

Laws library — `/locale/laws · /laws/[slug]`

Layout: List of Azerbaijani codes and laws; detail page renders the text with an auto-generated table of contents from `##` headings.

Logic & steps:

- LawDoc model with `kind CODE|LAW`.
- TOC extracted from the markdown headings at render time.
- Each document carries its `e-qanun.az` source link.

Access: Public.

Limitations: Seeded with `Əmək Məcəlləsi` (real text) plus two source-linked entries; full texts uploaded via the admin editor. Official texts are public-domain acts.

Practice-area landings — `/locale/areas · /areas/[slug]`

Layout: Index of the ten practice areas; each landing gathers matching lawyers (with live next-available chips and hearts), tagged Q&A entries and tagged articles on one SEO-shaped URL.

Logic & steps:

- The lawyer cards and chip computation are lifted verbatim from the directory, so they can never drift apart.
- Landing filters to APPROVED, slugged profiles in the area.
- Per-locale area names via `lib/locale-pick`.

Access: Public; hearts for clients only.

Limitations: Chips depend on the lawyer having availability rules.

Trust trio — `/locale/about · /how-it-works · /contact`

Layout: About: mission and three value cards. How it works: two numbered three-step ladders (client-side, lawyer-side) each with its CTA. Contact: support email as a `mailto` card plus two self-serve doors.

Logic & steps:

- Fully keyed in three languages.
- Contact is deliberately a `mailto` card, not a form — no backend, no spam surface during beta.

- SUPPORT_EMAIL is a single constant at the top of the contact page.

Access: Public.

Limitations: About states only verifiable facts — no invented team section.

Legal calculators — /{locale}/tools/rusum · /tools/muddet

Layout: Fee calculator: claim amount → estimated court fee, with the full bracket table rendered on the page for auditability. Deadline calculator: decision date + case type + stage → last day to appeal, with weekend shifting and days-remaining.

Logic & steps:

- Bracket and period figures live as labeled constants at the top of each file.
- Month arithmetic follows the procedural rule (same day next month, else the month's last day).
- Both pages ship robots noindex and stay out of the sitemap.

Access: Public.

Limitations: LAYİHƏ (draft) status: figures are unverified against e-qanun.az; indexing is gated on that verification. Public holidays are not modeled.

Lawyer authorship

My articles — /{locale}/lawyer/articles

Layout: List of the lawyer's own articles with status pills (Baxılır / Dərc olunub); editor for trilingual title, excerpt and lite-markdown body with auto-slug and practice-area tag.

Logic & steps:

- APPROVED lawyers only; others redirect to the dashboard.
- Submissions save as drafts (publishedAt null) awaiting admin acceptance.
- Drafts are editable and deletable by their author; published articles lock (edit via admin).
- Accepted articles surface on the blog and in the author's public profile.

Access: Login + APPROVED lawyer profile.

Limitations: Rate-limited 10 creates/hour, 30 edits/hour.

Authentication & account

Sign in — /{locale}/login

Layout: Email-first form (autofocus, autocomplete, show-password eye), forgot link, Google button (env-gated), Apple button (env-gated), divider, inline switch to the phone-code door; notices for failed email verification / Google errors.

Logic & steps:

- Email+password → POST /api/auth/login; on twoFactor:true response the form swaps to a 6-digit code step (masked phone shown) → POST /api/auth/login-2fa.
- Phone mode: request-code → verify, minting the same session.
- ?next=path honored (same-origin only).

Access: Public.

Limitations: One deliberately vague error for bad credentials (anti-enumeration).

Registration (two-phase) — /{locale}/signup

Layout: Step 1: name, email, password (min 8, hint), REQUIRED phone with international hint, terms checkbox, social buttons. Step 2: 6-digit code to the phone ([DEV] echo box in beta). Done screen: check-your-inbox with [DEV] verification link.

YENİ ŞİFRƏ (MIN 8)

Yadda saxla

Uğurdan sonra: bütün cihazlardan çıxış

Logic & steps:

- POST /api/auth/forgot issues a 60-min single-use token (only if account+password exist) — response identical either way.
- POST /api/auth/reset consumes the token, rehashes, and deletes every session (sign-out-everywhere).

Access: Public.

Limitations: Token single-use; expired/consumed → explicit error with retry path.

Phone wall — /{locale}/complete-phone

Layout: Phone input → code step; brief explanation of why the number is required.

Vakilim.az

Logic & steps:

- Baku-month boundaries via UTC+4 arithmetic.
- Net = gross of COMPLETED bookings minus resolved-dispute refunds.
- Rating aggregates visible reviews with the same filter as the public directory.

Access: Lawyer (any status).

Limitations: Tiles hidden until APPROVED.

Services — /{locale}/lawyer/services

Layout: List + editor: type (VIDEO/WRITTEN), title per locale, duration, price, active toggle.

5. API reference

All mutation routes validate with zod, return { ok, error? } JSON, and sit behind the rate limiter where noted.

Content & authorship

Endpoint	Input	Behavior	Guard
POST /api/lawyer/articles	slug, titles, excerpts, bodies, area?	APPROVED lawyers create an article as a draft (publishedAt null) awaiting admin acceptance; slug clash → 409.	10/h
PATCH /api/lawyer/articles/[id]	partial fields	Edits an own, unpublished draft only; published articles are locked (NOT_EDITABLE).	30/h
DELETE /api/lawyer/articles/[id]	—	Deletes an own, unpublished draft.	30/h
POST /api/me/photo-file	multipart photo	Uploads an avatar (jpeg/png/webp ≤3MB) to R2, saves User.photoKey and mirrors it to the lawyer profile so the directory updates.	10/10min
GET /api/me/photo-file	—	Redirects to a short-lived presigned URL for the caller's own avatar.	session
POST/PATCH /api/admin/posts · /qa · /laws	content fields	Admin authoring for blog/news posts, Q&A entries and law documents; publishing a lawyer's draft is what accepts it.	admin

Authentication

Endpoint	Input	Behavior	Guard
POST /api/auth/signup-start	—	Validates details, clash-checks email+phone, sends OTP to the phone. No user created.	5/h per IP
POST /api/auth/signup-complete	—	Verifies the code, re-checks clashes, creates the user (phoneVerifiedAt set) and emails the verification link.	10/h per IP
POST /api/auth/signup	—	Retired one-shot signup — returns 410 GONE.	—
GET /api/auth/verify-email	token, locale	Consumes the single-use token, stamps emailVerifiedAt, mints a session, redirects to /{locale}/. Failure → /login?verify=failed.	—
POST /api/auth/login	email, password, locale?	Uniform INVALID_CREDENTIALS; EMAIL_NOT_VERIFIED gate; on 2FA accounts returns twoFactor:true + masked phone and sends a code instead of a session.	10/10min
POST /api/auth/login-2fa	email, password, code	Stateless second step: re-verifies the password, consumes the OTP, mints the session.	10/10min
POST /api/auth/request-code	phone, locale	Sends a login OTP (WhatsApp transport, [OTP DEV] echo fallback). International numbers accepted.	throttled
POST /api/auth/verify	phone, code	Phone-door login: attempt caps, consume-once, upserts the user and stamps phoneVerifiedAt (self-healing), mints the session.	attempt cap 5
POST /api/auth/forgot	email, locale	Always returns ok (anti-enumeration); issues a 60-min reset token when applicable.	5/h

POST /api/auth/reset	token, password	Consumes the token, rehashes, deletes all sessions (sign-out-everywhere).	10/h
GET /api/auth/google	next?	Sets the anti-CSRF state cookie and redirects to Google (select_account).	—
GET /api/auth/google/callback	code, state	Exchanges the code, applies the linking law (known sub → sign-in; verified email → link; new → create pre-verified; logged-in → attach; claimed elsewhere → inuse). Phoneless users are redirected to /complete-phone.	—

Account (me)

Endpoint	Input	Behavior	Guard
PATCH /api/me	fullName, email...	Profile fields; phone deliberately not accepted here.	throttled
POST /api/me/password	current?, password	Set/rotate password; current required when one exists.	10/10min
POST /api/me/phone	action start confirm, phone, code?	Change/complete phone with OTP; clash-checked; stamps phoneVerifiedAt.	8/10min
POST /api/me/2fa	action start enable disable	OTP-confirmed enable (also stamps phone verification); password-gated disable.	10/10min
POST /api/me/locale	locale	Persists the interface language to the account (LocaleSync).	—

Directory & profiles

Endpoint	Input	Behavior	Guard
GET /api/lawyers/[slug]/slots	service, range	Free slots from rules + buffer minus busy bookings; Asia/Baku.	—
GET /api/avatars/[id]	—	Presign-redirect to the profile photo; 404 when absent or storage unconfigured.	cached 5 min
POST /api/favorites	lawyerProfileId	Toggle; CLIENT only; APPROVED profiles only.	—

Bookings & meetings

Endpoint	Input	Behavior	Guard
POST /api/bookings	lawyer, service, slot	Creates REQUESTED booking with price snapshot; double-book guarded by unique constraint.	—
POST /api/payments/mock	bookingId	Simulated payment; idempotent.	—
POST /api/lawyer/bookings/[id]/decision	accept decline	Lawyer decision; notifications both ways.	—
POST /api/bookings/[id]/cancel	—	Tiered refund by notice window; both notified.	—
POST	newSlot	Proposes/moves per policy; counterpart notified.	—

/api/bookings/[id]/reschedule			
GET /api/bookings/[id]/calendar	—	ICS download for CONFIRMED bookings; event text in the requester's saved language; 409 otherwise.	participants only
GET /api/bookings/[id]/call-token	—	LiveKit token inside the join window only.	participants
POST /api/bookings/[id]/recording/start	—	Starts room recording to R2 per consent flow.	participants
GET/POST /api/bookings/[id]/messages	text/attachment	Chat thread within the messaging window.	60/min
GET /api/bookings/[id]/attachments/[messageId]	—	Authenticated attachment proxy.	participants
POST /api/bookings/[id]/review	stars, tags, text	One review per completed booking inside the window.	5/h
POST /api/reviews/[id]/reply	text	Lawyer's single reply.	throttled
POST /api/bookings/[id]/dispute	reason, text	Opens a dispute within 72h of completion.	5/h
POST /api/lawyer/disputes/[id]/response	text	Lawyer statement inside the 48h window.	—

Documents

Endpoint	Input	Behavior	Guard
POST /api/doc-orders	template, answers	Creates an order from the fill wizard.	—
POST /api/doc-orders/[id]/pay	—	Mock payment; unlocks download + issues verification code.	owner
GET /api/doc-orders/[id]/download	—	Decrypts (AES-GCM at rest) and streams the locked PDF.	owner

Lawyer self-service

Endpoint	Input	Behavior	Guard
POST /api/lawyer/apply	profile + uploads	Creates/updates the PENDING application.	3/h
CRUD /api/lawyer/services/[id]	service fields	Service management.	—
CRUD /api/lawyer/availability/[id]	rules, buffer	Weekly rules and buffer.	—
PATCH /api/lawyer/settings	profile fields	Lawyer-side profile settings.	throttled

Admin

Endpoint	Input	Behavior	Guard
----------	-------	----------	-------

POST /api/admin/verifications/[id]	approve reject+reason	Publishes or rejects an application.	ADMIN
GET /api/admin/verification-docs/[profileId]/[kind]	—	Presigned license/ID document access.	ADMIN
POST /api/admin/disputes/[id]/resolve	outcome, refundQepik	Resolves with optional refund; feeds earnings math.	ADMIN
POST /api/admin/reviews/[id]/hide	hide unhide	Moderation toggle affecting all rating math.	ADMIN
CRUD /api/admin/templates[.../toggle]	template schema	Document template authoring.	ADMIN

Platform

Endpoint	Input	Behavior	Guard
GET /api/jobs/tick	key	Cron heartbeat: reminders, request expiry, cleanups. Driven by cron-job.org.	keyed
POST /api/intake	text, locale	AI triage: area classification (DB-constrained), orientation summary, drafted first message, matching lawyers.	5/10min per IP

6. Core mechanics

Lawyer authorship & acceptance

Approved lawyers write trilingual articles at `/lawyer/articles`; submissions land as drafts. The admin's existing publish button is the acceptance gate — lawyer submissions appear in the `Yazılar` queue wearing a 'Vəkil məqaləsi' badge. Accepted articles flow onto the blog, their practice-area landing, and the author's public profile. Published pieces lock for the author (edits go through the admin).

Avatar pipeline

One route (`/api/me/photo-file`) handles every role: multipart upload, type and size validation, R2 write under `avatars/{userId}/{ts}`, `User.photoKey` saved, and — for lawyers — mirrored onto `LawyerProfile.photoKey` so the directory and profile update instantly. Reads go through a presigned redirect. Without R2 credentials the route returns an honest 503.

Practice-area landings

Ten SEO-shaped URLs where the directory's own lawyer cards and next-available chips (harvested verbatim, not reimplemented) meet the area's Q&A entries and articles. The shared code path guarantees the chips can never drift from the directory's.

Security headers & CSP posture

`next.config.ts` serves `nosniff`, `X-Frame-Options DENY`, `strict-origin-when-cross-origin` referrer policy, and a `Permissions-Policy` that keeps camera/microphone on-origin (LiveKit needs them) while disabling geolocation and payment. A full CSP is planned report-only during beta, enforced after. The Sentry wrapper composes around the `next-intl` plugin without disturbing these.

Boot-time env validation

`lib/env.ts` zod-parses `AUTH_SECRET` and `DATABASE_URL` at import (pulled in by the root layout): a missing or malformed secret fails the build with a named error rather than a runtime mystery. Gated integrations stay deliberately optional.

Error monitoring

Sentry (`@sentry/nextjs`) captures unhandled client, server and edge exceptions with source-mapped stack traces; instrumentation hooks plus `app/global-error.tsx`. Initializes to a no-op without a DSN, so local development stays quiet.

Query bounds guard

`scripts/query-bounds.mjs` walks every `findMany` call and flags any lacking a `take`: unless annotated 'unbounded-ok'. It runs in report mode in the pre-delivery chain; the census classifies the remaining unbounded sites as naturally bounded (ownership-scoped or `in-ids` fetches).

Sessions & cookies

A 30-day random token lives in the `vakilim_session` cookie (`httpOnly`, `sameSite=lax`, secure in production, `path=/`); only its salted SHA-256 hash is stored (`Session.tokenHash`). Every login door — password, phone OTP, Google, 2FA — mints identically via `createSession` + `sessionCookie`. Password reset deletes all sessions.

Mandatory verified phone (L4)

An account cannot be born without answering an OTP: signup is two-phase and the retired one-shot endpoint returns 410. Google arrivals without a phone are walled at /complete-phone. Phone-OTP logins stamp phoneVerifiedAt (self-healing for legacy users). Changing a phone in settings re-verifies it and clash-checks other accounts.

Slot engine

Weekly rules + per-lawyer buffer generate candidate slots in Asia/Baku (fixed UTC+4 arithmetic); existing bookings subtract as busy; the same engine feeds the profile picker and the directory's next-available chips.

Booking lifecycle

REQUESTED → (mock) paid → lawyer accepts → CONFIRMED → COMPLETED, or CANCELLED with tiered refunds by notice window (full / partial / none per the published refund policy). Unanswered requests expire via the cron tick with notification. Reschedules propose a new slot to the counterpart.

Reviews & rating

One review per completed booking within a limited window; one lawyer reply; admin hide removes a review from profiles, tiles and every rating aggregate (single hidden:false filter shared by directory and dashboard).

Disputes & refunds

Client opens within 72h of completion; lawyer answers within 48h (auto-nudge); admin resolves with an optional refund in qəpik that is subtracted from the lawyer's net earnings.

Notifications

Stored as type + params and rendered in the reader's language at read time; mirrored to email when Resend is configured; throttled to avoid storms.

Video & recordings

LiveKit rooms; join window opens 10 minutes before start; consent precedes recording; files persist to R2 with 30-day retention and admin-only playback.

Document engine

Templates carry a typed field schema; the wizard validates and creates an order; mock payment unlocks an AES-GCM-encrypted, locked PDF carrying a public verification code checkable at /verify.

AI intake

The prompt embeds the live practice-area list as the only permitted answers; the parser validates the returned slug (unknown → other); lawyers always come from the database. Without an API key the route returns a deterministic [AI DEV] echo.

Internationalization

az / ru / en route prefixes; 892 parallel keys guarded by scripts/i18n-check.mjs; per-locale metadata, hreflang, sitemap (approved, slugged profiles only) and robots; the account remembers its language (LocaleSync).

Jobs & rate limiting

cron-job.org drives /api/jobs/tick (reminders, expiries). An in-memory limiter guards messages (60/min), reviews & disputes (5/h), applications (3/h), intake (5/10min) and every auth mutation.

7. Environment variables

Variable	Purpose	Status
AUTH_SECRET	Session/OTP hashing salt	required
DATABASE_URL	Neon Postgres	required
LIVEKIT_URL / _API_KEY / _API_SECRET	Video calls	required for calls
R2 / S3 credentials (lib/storage)	Documents, photos, recordings	required for uploads
RESEND_API_KEY	Transactional email	beta gate №1
OTP_DEV_ECHO	true → codes/links echoed on-screen ([DEV])	beta mode switch
WHATSAPP_* (per README-whatsapp)	Real OTP delivery	beta gate №2 for strangers
GOOGLE_CLIENT_ID / _SECRET / NEXT_PUBLIC_GOOGLE_LOGIN	Google sign-in	5-min Console setup
NEXT_PUBLIC_APPLE_LOGIN (+ future APPLE_*)	Apple button (route pending \$99 program)	dormant
ANTHROPIC_API_KEY / ANTHROPIC_MODEL	AI intake brain	optional (echo fallback)
JOBS_KEY (tick ?key)	Cron authentication	required
NEXT_PUBLIC_GA_ID (GA4)	Analytics	optional
SENTRY_DSN / SENTRY_AUTH_TOKEN	Error monitoring + source-map upload	✅ wired (wizard)
NEXT_PUBLIC_SUPPORT_EMAIL (const today)	Contact page address	confirm value

8. Known limitations & honest gaps

- Payments are simulated end-to-end (bookings and documents); Epoint integration is one sprint away on the bank's approval. Refunds are ledger entries until then.
- Phone verification is cryptographically real only when WhatsApp delivery is live; with OTP_DEV_ECHO=true the code is shown on the requesting screen, so ownership is not proven (disclosed beta mode).
- Email delivery requires the Resend key; without it verification/reset links exist only as on-screen [DEV] links.
- Legal page bodies are AZ-only drafts (LAYIHƏ) pending professional review; RU/EN legal translations parked.
- Testing remains the weakest category: 56 unit tests cover pure logic, but there is no integration/E2E net — a Playwright smoke suite is the first post-beta sprint.
- Document catalog ships with 30 seeded templates (10 families × az/ru/en); bodies share one field-schema mold pending per-template legal drafting.
- Legal calculators (rüsum, müddət) ship noindex with LAYIHƏ banners: the fee brackets and appeal periods are unverified drafts awaiting an e-qanun.az check. Verification flips indexing on in two lines.
- Laws library seeded with one real code text (Əmək Məcəlləsi) plus two source-linked entries; full texts await upload through the admin editor.
- Demo content (50 lawyers, 21 posts, 20 clients) is seeded fiction with ASCII-transliterated AZ titles in the seed script; it exists to be replaced by real content.

- Apple sign-in: button ships dormant; routes await Apple Developer Program credentials (ES256 client-secret flow).
- Russian dictionary awaits a native-speaker review pass (machine-consistent today).
- Rate limiter is in-memory per serverless instance — adequate at beta scale, not a hard global guarantee.
- Recordings retained 30 days; no user-facing playback (admin only, by design).
- Vercel Hobby plan limits apply (bandwidth/function duration); fine at beta scale.
- Admin actions are trusted-operator tools: minimal confirmation friction by design.

9. Test accounts (development)

Phone	Role	Notes
+994 50 123 45 67	CLIENT	primary client walkthroughs
+994 55 987 65 43	LAWYER (approved)	Günəl Baxşıyeva — VIDEO 30 min / 50 ₼, WRITTEN 25 ₼; Ailə + Əmək areas
